Project & Technical Proposal

BIR EIS ELECTRONIC INVOICING & CAS / PTI COMPLIANCE PACKAGE

PROPOSAL NO: EIS-PROP-2026
CONFIDENTIAL & PROPRIETARY

Client Company:	[Client Company Name]	**Target System:**	QuickBooks Desktop (Pro / Premier / Enterprise)
System Provider:	[Your Business / Developer Name]	**Tax Regulations:**	BIR RR 8-2022, RR 9-2021, TRAIN Law & EOPT
Document Date:	October 2026	**Version:**	1.0 (Final Architecture Proposal)

⚖️ Executive Summary & Legal Framework

Under **Revenue Regulations (RR) No. 8-2022**, **RR No. 9-2021**, and the **Ease of Paying Taxes Act (RA 11976)**, covered Philippine taxpayers are required to issue electronic invoices and transmit sales data to the **Bureau of Internal Revenue Electronic Invoicing System (BIR EIS)**. This proposal outlines the deployment of a dedicated desktop middleware connecting your QuickBooks Desktop software to the BIR EIS Gateway without disrupting your operational workflows.

1 SYSTEM COMPLIANCE DELIVERABLES (DOCUMENTATION PACKAGE)

To support your official **Permit to Use (PTU) / Permit to Transmit (PTI/PTT) / CAS Accreditation** application with the assigned Revenue District Office (RDO) / Large Taxpayers Service (LTS), the following complete technical binder is provided:

- **Software Identity & Specification Document:** Comprehensive documentation of the middleware architecture, runtime profile (Tauri v2 + Rust backend + SQLite cache), and QuickBooks COM SDK connector.
- **System Architecture & Data Flow Diagram:** Visual diagrams detailing transaction flow from QuickBooks company files (`.QBW`) through local validation, SHA-256 hashing, and HTTPS transmission to the BIR EIS Gateway.
- **BIR JSON Schema Specifications & Payload Mapping:** Itemized field mapping between QuickBooks invoice records and the canonical BIR EIS JSON schema format.
- **Audit Trail, Security Protocols, and Data Immutability Specifications:**
  - SHA-256 digital payload signature generation for tamper-proof compliance.
  - Immutable chronological CAS audit logging tracking all creation, modification, and transmission events.
  - Local archival in Microsoft Access (`.accdb`) / SQLite database formats.
- **User Operation and System Administration Manual:** End-to-end visual operational guide covering initial setup, QuickBooks syncing, tax code mapping, invoice printing, and transmission.

2 CORE MIDDLEWARE FUNCTIONAL MODULES

MODULE	DESCRIPTION & TECHNICAL CAPABILITIES
1. QuickBooks COM Bridge	Direct Windows COM / QBXML bridge extracting invoices, customer profiles, items, and tax rates without manual CSV export/import steps.
2. BIR EIS Tax Engine	Automated tax calculation engine supporting: • 12% VATable Sales (`Gross / 1.12`) & Output VAT (12%) • 0% VAT-Exempt & Zero-Rated Sales (Direct Exports / PEZA) • Senior Citizen & PWD 20% statutory discount + VAT exemption • Creditable Withholding Tax (BIR Form 2307: 1% Goods / 2% Services)
3. EIS API Gateway Transceiver	Automated batch JSON packaging, SHA-256 digital signature computation, and secure HTTPS transmission with official BIR Acknowledgement Numbers (`EIS-ACK`).
4. CAS Print & PDF Engine	Multi-page synchronized continuous and A4 printing with mandatory BIR CAS accreditation footer and scannable verification QR codes.
5. MS Access Exporter	1-click automated synchronization with local MS Access (`.accdb`) databases for offline audit readiness.

3 IMPLEMENTATION & CERTIFICATION SCOPE

- **Phase 1: Middleware Deployment & QuickBooks Field Mapping**
  Deploy desktop middleware on client workstations; connect to live QuickBooks company file; configure BIR Form 2303 profile and map sales tax codes (`TAX`, `NON`, `ZERO`, `SENIOR`, `EWT`).
- **Phase 2: EIS Portal Registration & API Credential Configuration**
  Assist client in enrolling with the BIR EIS Developer Portal; configure API Client ID, Client Secret, and Gateway Endpoints (Sandbox vs. Production).
- **Phase 3: EIS Sandbox Testing & Mandatory Scenario Execution**
  Execute all mandated BIR test transaction scenarios (Standard VAT, Exempt, Zero-Rated, Senior/PWD, Withholding Tax); collect JSON logs, payload hashes, and `EIS-ACK` receipts for the BIR evaluation team.
- **Phase 4: PTI/PTT Application Dossier Preparation & Technical Demo**
  Compile complete RDO accreditation binder; provide technical demonstration support during BIR evaluation; switch middleware to live Production mode upon permit issuance.
- **Phase 5: Staff Training & Post-Implementation Warranty**
  Conduct hands-on training for accounting and IT personnel; provide 30-day post-go-live stabilization warranty for updates and schema support.

4 PROJECT TIMELINE & MILESTONES SCHEDULE

PERIOD	MILESTONE FOCUS	KEY DELIVERABLES & OUTPUTS
Week 1	Environment Setup & QuickBooks Integration	Middleware installed; QuickBooks COM connection verified; Tax mapping and company profile fully configured.
Week 2	BIR EIS Sandbox Testing & Verification	Sandbox credentials configured; Execution of mandatory BIR test scenarios; Collection of JSON logs and `EIS-ACK` receipts.
Week 3	Accreditation Dossier Compilation	Finalization of RDO Technical Binder, System Architecture diagrams, and User/Admin Operations Manuals.
Week 4	BIR Demo, Go-Live & Staff Training	Technical demo support with BIR evaluators; Production deployment; Staff training session and handover.

5 SIGN-OFF & FORMAL ACCEPTANCE

By signing below, the parties agree to the implementation scope, deliverables, and timeline specified in this proposal.
